NEWS FROM 3/4A!

On Tuesday 9\textsuperscript{th} of August, the grade 3/4s travelled by bus to the C.S.I.R.O. We learnt about all different types of forces as part of our inquiry unit.

When we arrived at the C.S.I.R.O. we met a lady whose name was Sophie who led us into a building. We went into a room with lots of tables. On the table Sophie showed us some activities that we would be doing about forces. We think the most popular activity was where we had to roll a cylinder shaped container which had a type of magnet in it.

Jonathon was picked to sit on either one nail or a thousand nails. He sat on a thousand nails, but surprisingly he was not hurt (because the force was spread out).

We went to have lunch at Thomas Street Adventure Playground. The playground was very enjoyable and huge!

We all had a brilliant time, but sadly it had to end. By Daphne and Raquel.

Jim, Jonathan and Kaan were building a bridge. It was really hard to put up! By Kaan.

Dean, Theodore and James R were balancing birds. How it worked.....it had all its weight at the front to make it balance. By Dean.

The train could float but if you turned it back it could not float. By Jovan.

This was so much fun but I was about to fall off. This was thinner than the beam at Gymnastics. By Ellie.
